Randolph Building
401 Dulany Street
Alexandria, VA 22314

Sir:

1. I, Shinji FURUSHO, the inventor in the above-captioned application, state that I am an expert in the field of data processing research and development, and that I am also the inventor of the subject matter of Japanese Patent Application Laid-open No. JP 2000-339390 A (hereafter, the "Shinji Document," of record), which was filed in Japan on May 31, 1999 as Japanese Patent Application No. 11-151156. These facts are evident from the face of the Shinji Document.

2. The fact that I am the inventor of the subject matter of the Shinji Document is corroborated by the following facts. First, U.S. Patent 6,712,751 B1, issued to me on April 13, 2004, which was the U.S. National stage application of International Application No. PCT/JP00/03465, filed May 30, 2000, and which claimed priority to Japanese Patent

Application No. 11-151156. The fact that U.S. Patent 6,712,751 B1 claims priority to Japanese Patent Application No. 11-151156, which published as the Shinji Document, is evidence that I am the inventor of the subject matter of the Shinji Document. In addition, the Delphion Integrated View corresponding to U.S. Patent 6,712,751, downloaded on December 12, 2008, and previously filed as "Exhibit A" in the above-captioned matter on December 16, 2008, lists me as the inventor of U.S. Patent 6,712,751 and lists the Shinji Document (JP 2000-339390 A2) as a member of the same patent family. This additional information further demonstrates that I am the inventor of the subject matter of the Shinji Document.

3. The fact that U.S. Patent 6,712,751 and the Shinji Document disclose the same subject matter, of which I am the inventor, is plainly evident from a comparison of the documents. For example, the same specific relationship pertaining to point values disclosed in col. 6, lines 33-57, of U.S. Patent 6,712,751 is disclosed in ¶ [0017] of the Shinji Document. Furthermore, both documents include the same forty-nine (49) figures with subparts, although the figures in the Shinji Document have Japanese characters and the figures of U.S. Patent 6,712,751 employs English characters. A side by side comparison of just some of the figures, namely, Figures 1, 24 and 48 provided below makes it clear that the same drawings are used in both documents.

FIG. 24

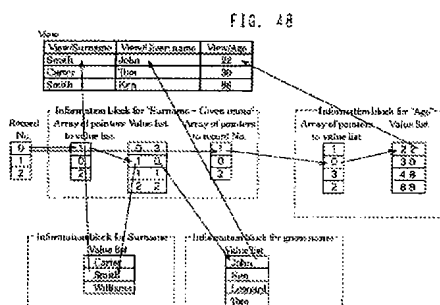

FIG. 48

5. In view of the above facts, I believe I have established that I am correctly listed as the inventor of both the Shinji Document and U.S. Patent 6,712,751, which disclose the same

invention and which are members of the same patent family.

Testimony Regarding the Shinji Document

6. As inventor of the subject matter of both the Shinji Document and the invention of the above-captioned patent application, I will point out certain distinguishing features of the invention from the subject matter disclosed by the Shinji Document. In doing so, I will reference U.S. Patent 6,712,751 (hereafter, the “Furusho Patent”) for the Examiner’s convenience. As established above, the Furusho Patent discloses the same invention as the Shinji Document.

7. The Shinji Document discloses a structure for table-format data with a small data size whereby a plurality of tables of table-format data can be joined as desired, a method of concatenating table-format data, and a method for displaying concatenated table-format data (See Abstract of the Furusho Patent and see Abstract of the Shinji Document). In accordance with the method disclosed by the Shinji Document, each table of table-format data is constructed in a manner such that each table is divided into one or more information blocks consisting of: (i) a value list in which the field values are stored in the order of a field value number corresponding to the field value belonging to a specified field, and (ii) a pointer array in which pointer values for pointing to said field value numbers are stored in a unique record order (See Abstract of the Furusho Patent and see Abstract of the Shinji Document).

8. In other words, the Shinji Document discloses a method of concatenating a plurality of tables of table-format data where each table is represented by an array of records containing a field and the field values contained therein, wherein the method comprises the steps of: (a) constructing each table of table-format data in a manner such that each table is

divided into one or more information blocks consisting of (i) a value list in which the field values are stored in the order of a field value number corresponding to the field value belonging to a specified field, and (ii) a pointer array in which pointer values for pointing to said field value numbers are stored in a unique record order; (b) finding equivalent fields among a plurality of tables of table-format data, identifying the information blocks for the equivalent fields in each of the plurality of tables of the table-format data; and (c) comparing the value lists contained in the identified information blocks, and setting both value lists to the same values, at the time of setting the value lists to the same values, adding pointer values to associated pointer arrays in the information block to which that field value is added, and by making the value lists contained in the information blocks for specific fields in the plurality of tables of table-format data equivalent, concatenating the table-format data (See, e.g., claim 1 of the Furusho Patent and see claim 1 of the Shinji Document).

9. However, the Shinji Document does not teach, or even suggest, (i) “creating an ordered set array containing record numbers of records selected from the array of records, wherein the selected record numbers are arranged in a specified order in the ordered set array” and (ii) “arranging a pointer value in the first pointer array at a position indicated by each of the record numbers of the ordered set array into an item value number array at a position corresponding to a position where the record number is arranged in the ordered set array” as recited by independent claims 1, 3, 9 and 11. The Shinji Document also does not teach, or even suggest, (iii)

“creating a second value list storing value elements contained in the item value number array and a second pointer array storing position elements indicating elements in the second value list corresponding to the record numbers by referring to the item value number array, wherein

a value in the first value list is specified from a record number of the ordered set array through a first element in the second pointer array at a position indicated by the record number and a second element in the second value list at a position indicated by the first element in the second pointer array”

as recited by claims 1 and 9, and (iv)

“specifying a value in the first value list from a record number of the ordered set array through an element in the item value number array at a position indicated by the record number”

as recited by claims 3 and 11.

10. In other words, the Shinji Document does not teach, or suggest, steps (b), (c) and (d) recited by independent claims 1 and 9, and steps (b), (c) and (d) recited by independent claims 3 and 11 of the above-captioned application. According to the embodiments of the present invention recited by claims 1, 3, 9 and 11, a data processing method is provided that can efficiently handle a small subset from a very large tabular format data. With respect to the embodiments of the present invention recited by claims 1 and 9, the size of the value list is shrunk because the second value list, whose size is smaller than that of the first value list, is generated. Consequently, it is possible to shorten the processing time for retrieval, aggregation, sorting and joining.

11. In sum, as the inventor of the subject matter of both the Shinji Document and the presently claimed invention, and as an expert in the art, I can tell you that the Shinji Document does not disclose the same invention as claimed by the above-captioned application and, therefore, cannot anticipate the invention claimed by the above-captioned application.

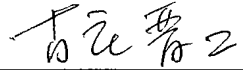

12. I declare under penalty of perjury that the foregoing is true and correct, that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements so made are punishable by fine or imprisonment, or both, under 18 U.S.C. § 1001 and that such willful false statements may jeopardize the validity
